PROFILE

I am a student in UNISON, my carrer is Systems Software Engineer.

I have been able to develop various projects in multiple languages, such as Python and Java. I also have some knowledge of SQL, and I continue to learn more in this environment

I currently hold a part-time job where I can further develop my skills in networking and computer support. I am always open to new opportunities and committed to continuous learning.

WORK EXPERIENCE

Technical support

TelSoluciones

May 2023 - actuality

- Managing the proper functionality of the computer systems used within the company, both in administrative and operational networks."
- Management of server networks and network connections

PROJECTS

WEB veterinary

March 2022 - May 2022

This project involves a website for managing a veterinary clinic, where it allows the creation of users, generating appointments, scheduling appointments, and displaying lists of both users and pets.

Python was used for the backend development, along with Bootstrap and CSS for frontend development.

Web Administration Department

March 2023 - May 2022

This project's purpose is to enable a real estate company to manage its administration on a website, making it user-friendly for everyone.

It includes user accounts, each with different templates, as well as displaying lists and records for scheduling and showcasing rentals.
